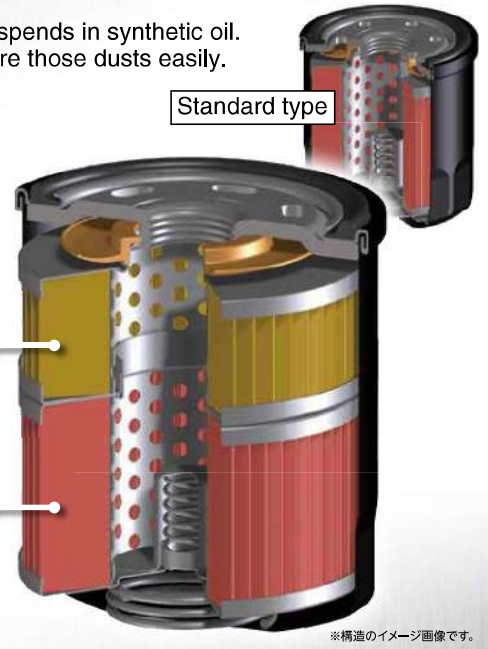
High-performance

Double-layered filter

VIC DOUBLE CORE OIL FILTER

Suitable for synthetic oil* which has high functionality detergent-dispersant system.

*fine dusts from inside of the engine suspends in synthetic oil.
High quality filtration systems will capture those dusts easily.



※構造のイメージ画像です。

Filtrate oil efficiently by double-layered filter

Captures engine sludge thoroughly compared to standard filter

Efficiency of filtration is 1.5 times better than standard filter

(Compared with our standard product)

日本製 MADE IN JAPAN

Q What is the difference?

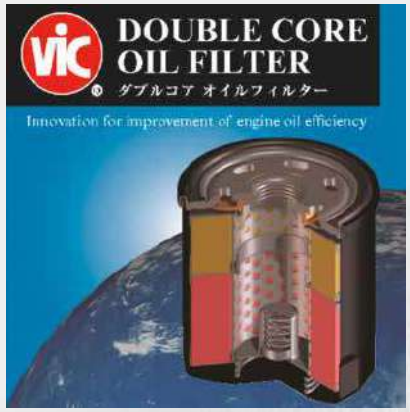
A Double core oil filter is made by double layer filters.
General 20-micron filters with 10-micron fine filters capture fine dusts easily right after installation.
In other words, this filters has an efficiency to keep oil clean from beginning of use.

Q What kind of car is suitable for this filter?

A This filter is suitable for any passenger cars if it matches the type of vehicle.(Covers 80% of Japanese gasoline-powered vehicles)
Double core oil filter is suitable for synthetic oil as well.
Also recommended for the vehicle stressed by high speed rotation and high temperature, and for brand new car which generates iron powder often.

Q How often do we need to replace the filter?

A Frequency of replacing filters are same as ordinary filters.
However it is better to replace oil and filter at the same time to keep the engine clean.



Please try our double core oil filter!

*Install to the souped up engine car is not covered by the warranty due to function and performance is not fitted by auto manufacturer.

DRIVING IN SEVERE CONDITION

Cheap and poor filters will shorten the life of your car.

To protect your precious car...

High performance, High quality

VIC OIL FILTER

What is severe condition

Over 20,000km — **Long distance driving** — Annual driving over 20,000km	Less 8km/Run — **Short distance driving** — Less 8km/Run
Long idling — Total idling 2 hours or 30% of driving	Less 15km/h — **Low speed driving** — 30km driving at less 15km/h per day

Oil / Oil filter replacement guideline

Condition	Normal	Severe	Severe
Oil filter	*Genuine*	*Genuine*	*Poor filter*
Gasoline engine	*10,000km(12mon.)*	*5,000km(6mon.)*	*2,500km (3mon.)*
Diesel engine	*5,000km(6mon.)*	*2,500km(3mon.)*	*1,250km(1.5mon.)*

VIC oil filters have the same performance and quality as genuine products.

Traffic congestion in Philippines can be considerably worse than severe condition.

We recommend a VIC filter for your car.

To protect the engine for a long time, change oil and oil filter sooner.

HYBRID & IDLING.STOP CAR

Cheap and poor filters will shorten the life of your car.

To protect your precious car...

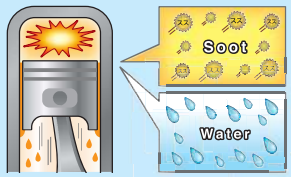
High performance, High quality

VIC OIL FILTER

Why we recommend VIC oil filters

Compared to regular cars, Hybrid and Idling stop cars have more engine stops/starts, And the engine oil remains difficult to warm up easily, and soot and water easily occur.

In particular, water is less likely to evaporate because it has a lower oil temperature than regular cars.



"Soot" and "Water" accelerate oil deterioration

VIC oil filters have good performance for filtering soot, water and other debris. Also the effect can be maintained for long time

MADE IN JAPAN

To protect the engine for long time, change the oil and oil filter sooner.

Cabin Filter for air-conditioners
Performance and Role

Air Conditioner ELECTRET FILTER

EXtype

Q Is the air in your car safe?!

A An air conditioning filter that promises a comfortable driving experience.

The 4 Powers of X Power are here to Help!

X 4 Powers Power

Case 1 Pollen gets inside the car and we can't stop sneezing…

Thoroughly blocks the entry of pollen, dust, diesel particulate and other impurities from the air conditioner.

Case 2 My nasal inflammation makes it hard to concentrate on driving…

Comprehensively blocks and suppresses mold , mites (dead mites, excrement) and other airborne allergens from the air conditioner.

Case 3 The air conditioner smells bad…

Cuts unpleasant odors from the air conditioner.
Enjoy a comfortable drive free from offensive odors!

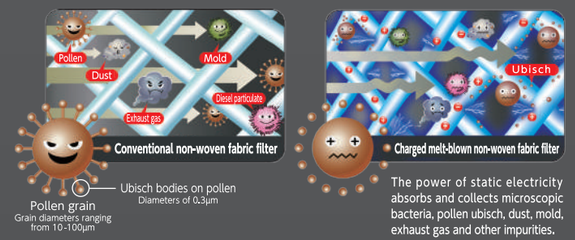
Case 4 The air conditioning doesn't keep the car cool…

Featuring a design which emphasizes quietness and breathability. Supports comfortable driving through long-term preservation of air conditioning effectiveness and airflow.

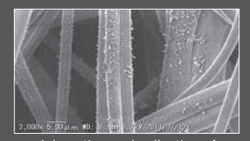
Adsorption Power

Featuring a charged melt-blown non-woven fabric filter

The third layer is a melt-blow non-woven fabric filter with individual fibers that have been semi-permanently charged (electrostatic charge). Static electricity has the effect of thoroughly absorbing and collecting allergens such as microscopic pollen and dust, as well as diesel particulate and exhaust gas which cause atmospheric pollution.



The power of static electricity absorbs and collects microscopic bacteria, pollen ubisch, dust, mold, exhaust gas and other impurities.



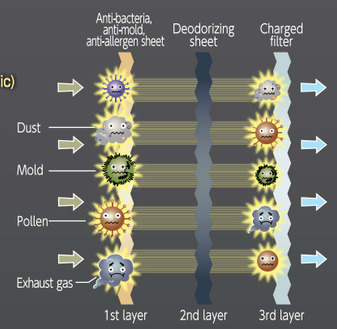
Adsorption and collection of 0.3 micron particulate (image)

Adsorption and physical collection of 7-8 micron particulate

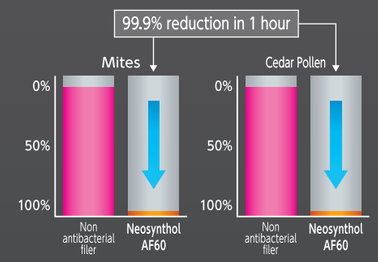
Suppression Power

Includes the anti-allergic agent Allersave (a natural polyphonic) and anti-bacterial agent Neosynthol

The first layer is a compound sheet featuring Allersave, which is an anti-allergic agent using natural plant extracts as active ingredients, and Neosynthol, an anti-bacterial agent which suppresses the proliferation of mold and bacteria coliform.
In addition to reducing pollen, mites and other allergens caught by the filter, this design suppresses bacteria which reproduces in dust and mold, thus maintains clean air from the air conditioner.



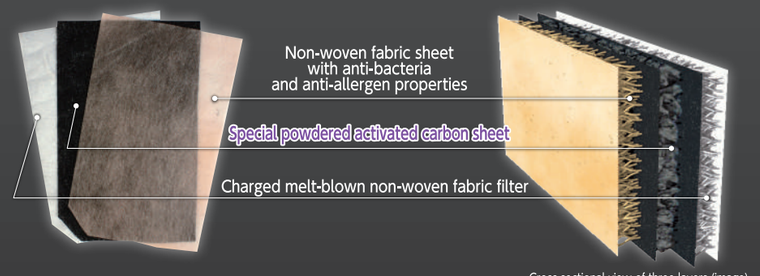
Allergen Reduction Test (ELISA Method)



Deodorization Power

Featuring a special powdered activated carbon sheet

The second layer includes special powdered activated carbon with outstanding deodorization performance. Moreover, the inclusion of an adsorbent agent further increases this deodorization performance. The filter absorbs impurities such as hydrogen carbonate gas, alkaline gas and acidic gas, maintaining stable and long-term deodorization capability.



Cross-sectional view of three layers (image)

Airflow Power

Charged melt-blown non-woven fabric filter + Special powdered activated carbon sheet

High breathability is yet another feature of the third layer, a charged melt-blown non-woven fabric filter which uses static electricity to absorb impurities.
Furthermore, the special powdered activated carbon used in the second layer has been formed into a thin sheet to prevent the activated carbon from interfering with breathability. This maintains quiet and stable airflow over the long-term while also ensuring breathability.
